TEAM AGREEMENT

1.1.	**Team name**
	JAFAR JSON
1.2.	**Team leader**
	Kipras Vytautas Spirgys
1.3.	**Team members (except team leader)**
	Tautvydas Danilevičius, Jaroslav Drobitko, Jonas Grubliauskas, Mantas Kalvinskas
1.4.	**Team leader's election**
	The team leader was elected through a discussion involving all team members, which helped identify the person with the most authority among everyone.
1.5.	**Responsibilities of the team leader**
	● Definition of the scope of work for a week. ● Conflict resolution. ● Final say on meeting schedules.
2.	**Team ambition (common desired grade)**
	8
3.	**Key team rules**
	● Communicate progress visibly throughout the week. ● Finish tasks on time. ● Every person should be involved when making big decisions. ● Review each other's work and point out flaws.
4.	**Work distribution**
	Tasks are distributed during the live discussion. Everyone who wants to perform a particular task must argue why they are a suitable candidate. If, after the discussion, there are several members applying for a task, its assignee is chosen by ranked-choice voting. Tasks are logged, and their assignees are assigned in GitHub Projects.
5.	**Team members' availability**
	● The team members are available for meetings on Wednesdays. ● Meetings might not happen in person every week due to individual reasons, in case of that, meetings will happen online. ● Individuals will be available for chatting throughout the work week but not always on weekends.
6.	**Team meeting times**
	● Wednesdays before 17:00. ● The format of the meeting will be decided in advance (online / offline).

7.	**Progress tracking**
	The team will track progress in Github Projects. ● The team will enter tasks that are needed to be done in a *To Do* category. ● Tasks that are being done will be put in the *In Progress* category. ● Tasks that are finished will be put in the *Done* category.
8.	**Sanctions and punishment**
	If someone fails to complete their weekly task, then the next week they will have to do an additional task. They might also lose the privilege of applying for a task during team meetups the following week.
9.	**AI usage**
	The team will use AI for writing specifications but not for coding.

PROJECT PROPOSAL: NOTEPAD#

Minimalist Desktop Code Editor

Executive Summary This proposal outlines the development scope for Notepad#, a lightweight desktop code editor designed to provide essential source-code editing features within a minimalist interface. The target outcome is a balanced application that remains as simple as possible to construct, while serving as the benchmark subject for full software requirement specifications.
Project Name: Notepad#
Target Platform: Desktop (Cross-platform GUI framework)
Core Functional Scope Notepad# will implement the core capabilities required for efficient code editing: ● **Text Editing Core:** Multi-tab editor layout with line numbering, active-line highlighting, line formatting, and standard text manipulation (undo/redo, cut/copy/paste). ● **Syntax Highlighting:** Basic language token recognition for target languages (e.g., C#, Python, JavaScript). ● **File Management:** Standard system operations to create, open, edit, and save a file. ● And more
